

# Home Base

*All problems in section 1.1, Home Base.*

Here is an opportunity for some practice.

**Problem 1** Explain why the following “joke” is “funny:” *There are 10 types of people in the world. Those who understand base two and those who don’t.*

---

**Problem 2** You meet some Tripod aliens, they tally by threes. Thankfully for everyone involved, they use the symbols 0, 1, and 2.

- (a) Can you explain how a Tripod would count from 11 to 201? Be sure to carefully explain what number comes after 22.
  - (b) What number comes immediately before 10? 210? 20110? Explain your reasoning.
- 

**Problem 3** You meet some people who tally by sevens. They use the symbols *O*, *A*, *B*, *C*, *D*, *E*, and *F*.

- (a) What do the individual symbols *O*, *A*, *B*, *C*, *D*, *E*, and *F* mean?
  - (b) Can you explain how they would count from *DD* to *AOC*? Be sure to carefully explain what number comes after *FF*.
  - (c) What number comes immediately before *AO*? *ABO*? *EOFFA*? Explain your reasoning.
- 

**Problem 4** Now, suppose that you meet a hermit who tallies by thirteens. Explain how he might count. Give some relevant and revealing examples.

---

**Problem 5** While visiting Mos Eisley spaceport, you stop by Chalmun’s Cantina. After you sit down, you notice that one of the other aliens is holding

a discussion on fractions. Much to your surprise, they explain that  $1/6$  of 36 is 7. You are unhappy with this, knowing that  $1/6$  of 36 is in fact 6, yet their audience seems to agree with it, not you. Next the alien challenges its audience by asking, “What is  $1/4$  of 10?” What is the correct answer to this question, and how many fingers do the aliens have? Explain your reasoning.

---

**Problem 6** When the first Venusian to visit Earth attended a sixth grade class, it watched the teacher show that

$$\frac{3}{12} = \frac{1}{4}.$$

“How strange,” thought the Venusian. “On Venus,  $\frac{4}{12} = \frac{1}{4}$ .” What base do Venusians use? Explain your reasoning.

---

**Problem 7** When the first Martian to visit Earth attended a high school algebra class, it watched the teacher show that the only solution of the equation

$$5x^2 - 50x + 125 = 0$$

is  $x = 5$ .

“How strange,” thought the Martian. “On Mars,  $x = 5$  is a solution of this equation, but there also is another solution.” If Martians have more fingers than humans, how many fingers do Martians have on both hands? Explain your reasoning.

---

**Problem 8** In one of your many space-time adventures, you see the equation

$$\frac{3}{10} + \frac{4}{13} = \frac{21}{20}$$

written on a napkin. How many fingers did the beast who wrote this have? Explain your reasoning.

---

**Problem 9** What is the smallest number of weights needed to produce every integer-valued mass from 0 grams to say  $n$  grams? Explain your reasoning.

---

**Problem 10** Starting at zero, how high can you count using just your fingers?

- (a) *Explain how to count to 10.*
- (b) *Explain how to count to 35.*
- (c) *Explain how to count to 1023.*
- (d) *Explain how to count to 59048.*
- (e) *Can you count even higher?*

*Explain your reasoning.*
